PROFESSIONAL EXPERIENCE

*Senior penetration tester with 5+ years of offensive security experience across web, mobile, API, and cloud environments.
CVE contributor specializing in manual web and API testing, and building AI-augmented security automations.*

Virtue Security, Remote

Senior Penetration Tester

2025 – Present

- Led 15+ penetration tests across web, mobile, and AWS environments for clients operating in regulated industries including healthcare, banking, and telecommunications.
- Built an AI-driven testing framework that orchestrates security tools and uses Claude Code to statically analyze JavaScript in SPAs, surfacing routes, endpoints, and attack paths that traditional DAST scanners miss, significantly expanding coverage within fixed engagement timelines.
- Developed an internal AWS enumeration web application that ingests client cloud assets and visualizes cross-account network, IAM role, and policy relationships as interactive graphs, helping testers identify attack paths during cloud engagements.

Citibank, Remote

Offensive Application & API Vulnerability Analyst | VP

2023 – 2025

- Identified most High-risk issues in NAM AVA for 2024.
- Assisted in researching and reporting [CVE-2024-36459](#) and developed a scan check for the vulnerability.
- Led research into the DAST capabilities of Akamai/Noname and Traceable API Security Tools to improve shift-left testing strategies for REST/SOAP APIs, addressing OWASP Top 10 API Security Risks.
- Coordinated communication with Citi's Private Bug Bounty (PBB) security researchers, triaged and retested issues.
- Established an issue triaging process with Jira for Citi's PBB and Vulnerability Disclosure Program.
- Led the development of the internal Burp Suite extension for the team (Java).

Offensive Application Security Analyst | AVP

2022 – 2023

- Discovered 10% of the total High-risk vulnerabilities globally at Citi in 2023
- Reported impactful issues such as Remote Code & Command Execution (RCE), XSS, Auth Bypass, Privilege Escalation, SSRF, and HTTP Request Smuggling.
- Performed comprehensive white-box penetration tests with DAST tools: Burp Suite Pro, AppScan, ReadyAPI, SQLmap, and Kali Linux on Web, Mobile, Thick Clients, Microservices, REST, and SOAP APIs.
- Conducted code reviews and vulnerability assessments on internal and SaaS applications, including microservices, using tools like Checkmarx, Qualys, and Nessus.
- Performed infrastructure scanning using NMap, CrackMapExec, and Metasploit to identify vulnerabilities
- Created reports, collaborated with application teams to fix security issues, and provide actionable remediation guidance.

Citibank, Irving, TX

Java Software Engineer

2021 – 2022

- Worked with Java, Spring Framework, and Angular to contribute to internal applications.
- Acted as a security SME and guided the team's developers to adopt and implement cybersecurity best practices.

EDUCATION

University of North Texas — **Bachelor of Science in Computer Science** (*magna cum laude*)

2021

SKILLS & CERTIFICATIONS

Programming Languages: Python, JavaScript, Java, Bash

Offensive Security Tools: Burp Suite Pro, Kali Linux, SQLmap, Metasploit, NMap, CrackMapExec, Wireshark, ReadyAPI,

Code & Vulnerability Scanning: AppScan, Checkmarx, Qualys, Nessus

Methodologies: OWASP Top 10 (Web & API), Penetration Testing, Vulnerability Assessment, Code Review, API Security

Certifications: [GWAPT \(2025\)](#), [Burp Suite Certified Practitioner \(2023\)](#), [CompTIA Security+ \(2021\)](#)
